

## Client Profile

**Industry:** Data Management/High-Tech

**Location:** Silicon Valley, CA

**Specialty:** Storage Management Software

## Challenges

Client wanted to move their entire IT infrastructure to a Private Cloud from their data center in an effort to reduce cost and improve operational efficiencies. Being themselves a leading data management company, the large amount of data and the high number of systems that they wanted to be migrated to cloud and their application integration were all very challenging. There were not many tools in the industry which could migrate these large databases, 100s of millions of small files and multiple flavors of OS with minimum downtime.

## Our Solution

Buxton team built custom tools that migrated large databases and millions of application files with a minimum downtime. Reverse engineered the systems, identified application integration requirements and successfully implemented the same in the target data center. Solution also includes reconciliation of data.

## Business Impact

Buxton was able to migrate their critical applications and their corresponding Infrastructure with a minimal down time. Customer enjoyed no data loss, integrated applications, better security and better system performance. Best of all, the customer saved a substantial amount of money. This project was completed on time and was a huge success
