

## Client Profile

**Industry:** Search Engine/High tech

**Location:** Silicon Valley, CA

**Specialty:** Leading Internet Search Engine Company

## Challenges

Client was planning to upgrade their Oracle EBS Application and Database. They were overwhelmed in building a stable system. Since upgrade is a time-consuming project, client wanted to assess their system and database performance first before upgrade

## Our Solution

Buxton team reviewed infrastructure, database, and application bottlenecks. Designed Server, Storage, Database and Application solution that met client performance and High Availability needs. Buxton implemented leading practices for Oracle Database and EBS applications along with infrastructure changes. Buxton Implemented TLS/SSL security at all layers (Network, storage, application, database, web).

## Business Impact

Customer was able to achieve 2x to 10x performance improvement, better security, and highly improved system availability. Performance and stability gain was achieved without spending on expensive tools.
