

Client Profile

Industry: Search Engine/High tech

Location: Silicon Valley, CA

Specialty: Leading Internet Search Engine Company

Challenges

Client was planning to upgrade their Oracle EBS Application and Database. They were overwhelmed in building a stable system. Since upgrade is a time-consuming project, client wanted to assess their system and database performance first before upgrade

Our Solution

Buxton team reviewed infrastructure, database and application bottlenecks. Designed hardware, database and application solution that met client performance and High Availability needs. Solution used commodity hardware and storage.

Business Impact

Customer was able to see 2x to 10x performance improvement, better security and highly improved system availability. Performance and stability gain was achieved without using expensive products
